

LB BROTH (LENNOX)

#GCM02.0500
(for research only)

Formulation (g/L)

| | | | |
|------------------|-----------|----------------|------|
| Tryptone: | 10,00 | Yeast Extract: | 5,00 |
| NaCl: | 5,00 | | |
| Final pH (25°C): | 7,0 ± 0,2 | | |

Product: Dehydrated powder for the preparation of nutritionally rich liquid medium for the growth and maintenance of recombinant strains of *Escherichia coli* in molecular biology studies.

Quantity: 500g

Appearance: Beige powder. Autoclaved medium should be clear amber.

Storage: 2°C – 25°C. When not in use, keep container closed to avoid hydration.

Preparation:

Add 20g of the dehydrated medium to one liter of distilled water. Mix well and dissolve by heating with regular agitation. Boil for 1 minute in order to dissolve completely. Dispense in appropriate containers and sterilize by autoclaving at 121°C for 15 to 20 minutes. Store at 2°C to 8°C.

Supplements

LB Broth (Lennox) is a rich growth medium, which contains all the nutritional requirements for *E.coli*. Tryptone and Yeast Extract are the sources for carbon, nitrogen, vitamins, minerals, and amino acids essential for growth, whereas sodium chloride supplies essential electrolytes for transport and osmotic balance. For faster growth, medium can be supplemented with glucose (0.1%) or glycerol (0.4%). Many supplements, including antibiotics, are heat-sensitive and cannot be autoclaved. These should be filter-sterilized and added to the medium after it has cooled down.

Quality Control

Each lot is tested by inoculating freshly prepared medium with a single colony of *Escherichia coli* ATCC 23724 and observation after incubation at 35 ± 2°C for 18 – 24h
